Job Title: Full Stack Developer	Department: Software
Reports to: CEO	Location: San Antonio, TX
Job Type: Full-Time Salary	HR@atma-energy.com

About ATMA Energy:

At ATMA Energy our mission is to build a world connected by clean, resilient & sustainable energy solutions. Founded in 2020 and headquartered in San Antonio, our core team came together to do the most good, collectively, with our individual skills. We provide expertly engineered solutions to our Residential, Commercial, and Utility clients' energy needs. Our willingness to develop and embrace new and innovative technologies positions ATMA Energy uniquely on the forefront of the Energy Market. Through energy systems optimization, valuing diverse ideas, and a deep expertise in engineering and people, we personalize solutions to power the world.

Job Summary:

We are looking for a motivated, driven & determined professional who is passionate about making a difference in our community and its energy footprint. The transition of our energy infrastructure to a resilient, distributed & renewable energy system is not for the faint of heart, as the challenges are plentiful and the resources are scarce. But the work is extremely important as we are decarbonizing the energy infrastructure one solar system at a time.

As a Full Stack Developer, you'll be part of a team of determined, humble and resourceful individuals that have come together to provide a radically different and refreshing solar buying experience. You will collaborate with the product and business team to deliver engaging user experiences and new products. You will take ownership of the front-end development process, converting visual prototypes and design specifications into responsive, mobile-first web applications using modern frameworks and libraries. You will build reusable components and front-end libraries and introduce new libraries to ensure our product evolves with the industry. You will work in a results-driven, fast-paced startup environment with opportunities to learn and grow on the job as we build the next leading technology company in solar. We are invested in your future, offering a competitive startup salary, benefits, and career growth opportunities.

Job Responsibilities:

- Developing front end website architecture.
- Designing user interactions on web pages.
- Developing back-end website applications.
- Creating servers and databases for functionality.

- Ensuring cross-platform optimization for mobile phones.
- Ensuring responsiveness of applications.
- Working alongside graphic designers for web design features.
- Seeing through a project from conception to finished product.
- Designing and developing APIs.
- Meeting both technical and consumer needs.
- Staying abreast of developments in web applications and programming languages.

Required Skills:

- Degree in computer science from an accredited university
- Strong organizational and project management skills.
- Proficiency with fundamental front-end languages such as HTML, CSS, and JavaScript.
- Proficiency with JavaScript frameworks such as Angular JS, React, and Amber.
- Proficiency with server-side languages such as Python, Ruby, Java, PHP, and .Net.
- Familiarity with database technology such as MySQL, Oracle, and MongoDB.
- Excellent verbal communication skills.
- Good problem-solving skills.
- Attention to detail
